

Michael “Brad” Smith

Software Engineer & Cybersecurity Expert

micsmi8944@gmail.com • 757-810-8460

[LinkedIn](#) • Newport News, VA 23602

Willing to relocate

Detail-oriented and versatile professional with substantial experience in both risk analysis and software engineering, skilled in security monitoring, programming, software and code analysis, and implementing proactive risk mitigation measures to increase network security and address evolving challenges. CompTIA Security+ certified professional with an active DoD Secret Clearance.

Areas of Expertise

- Software Development
- Cyber Security Management
- Risk / Vulnerability Assessment
- HTML, JavaScript, CSS
- SQL, T-SQL, VMWare
- C++, Java, PowerShell
- C#, [ASP.NET](#) Core, Python, Scripting
- Documentation & Reporting
- STIGs, Validation, Docker, Kubernetes

Professional Experience

Huntington Ingalls Industries, Suffolk, VA (through Insight Global)
Software Engineer 2

11/2025— Current

Developed new features and fixes for enterprise web applications, utilizing React.js to drive secure deployments in a regulated DoD environment.

- Worked cross-functionally with software and security teams to create and update existing code.
- Developed and maintained enterprise web applications leveraging HTML5, JavaScript, and React.js, ensuring stakeholder needs were met.

05/2021— 04/2025

By Light, Fort Eustis, VA
Information Assurance Engineer

Drove continuous process optimization and robust automation of risk reporting through the development of PowerShell, Python, and SQL solutions. Enabled data-driven decision-making and efficient compliance reporting by collaborating closely with cross-functional teams to streamline data consolidation and analysis.

- Developed and implemented PowerShell scripts that automated security documentation processes, saving 150 man-hours each quarter and increasing efficiency across risk reporting activities.
- Performed quarterly STIG audits of multiple software systems, ensuring compliance and documentation standards were met.
- Updated several applications with C# and C++ to resolve security vulnerabilities.
- Created multiple Python scripts to track open vulnerabilities, resulting in improved data consolidation and enabling agile, data-driven decision-making for vulnerability remediation.
- Designed and executed complex SQL queries and implemented several stored procedures in T-SQL to extract actionable insights for risk reporting, enhancing the accuracy and depth of internal compliance analysis.
- Collaborated with remote, cross-functional teams to automate compliance documentation updates, improving the consistency and timeliness of reporting deliverables.
- Utilized Java to pursue independent development projects, building foundational knowledge in scripting and data manipulation techniques.
- Oversaw the debugging and refinement of technology products to ensure reliability and scalability for enterprise applications.
- Trained engineering teams to foster a culture of security, adaptability, and technical excellence.
- Customized configuration for multiple applications for broad-scope deployment.
- Configured and implemented switches to improve network load balancing.
- Enhanced network security through diligent application and updating of Security Technical Implementation Guides (STIGs).

Directed development and security integration for full-stack web applications using C#, .NET Core, and modern front-end frameworks, driving secure deployments in a highly regulated DoD cloud environment. Enabled agile, compliant project execution with significant reductions in system vulnerabilities and measurable improvements in overall risk posture.

- Led a team of six developers in implementing secure software development practices, which reduced vulnerabilities in internal web applications by 10% and brought several applications into production using C# and ASP.NET Core.
- Developed and maintained multiple web applications leveraging C++, C#, .NET Core, Bootstrap, Angular, HTML5, and JavaScript, and contributed to a cloud migration project in a DoD-regulated environment, ensuring high levels of security and compliance.
- Managed CI/CD pipelines to accelerate secure feature delivery across full-stack projects, incorporating continuous code, security, and QA reviews to meet strict regulatory standards.
- Applied the Risk Management Framework (RMF) to internal applications, reducing the information system's risk surface by 30% through thorough risk assessments, vulnerability resolution, and security audits.

Education

Bachelor of Science in Computer Science
ECPI, Newport News, VA (graduated 2016)

Professional Development

CompTIA Security+
Security Clearance - Secret
First Aid training
